

SoundHound

SoundHound : has applied audio processing and machine learning on millions of songs to extract features that are characteristic of each song

The users of the application are all those who are looking for the speaker in a particular music

Features of the SoundHound App

- 1-Immediately identifies the song.
- 2-Supports hands-free use.
- 3-Offline assistance.
- 4-Built-in virtual assistant.
- 5-Integration with Spotify and Pandora.
- 6-LiveLyrics feature for finding out the lyrics.

The application works with natural language understanding technology.

Natural-language understanding (NLU) or natural-language interpretation (NLI) is a subtopic of natural-language processing in artificial intelligence that deals with machine reading comprehension. Natural-language understanding is considered an AI-hard problem.
